

## TEC Systems Creates New Division

*Due to customer needs for outsourced maintenance and projects, TEC Systems reorganizes to meet demand.*

WICHITA, KS – TEC Systems officially announced a recent reorganization by beginning operations of the appropriately named **TEC Industrial Services** division. With maintenance and project outsourcing growing at a rate of more than 10% per year since 2000, as well as the growing shortage of maintenance professionals, TEC realized the opportunity to serve its customers and target industries better.

TEC Industrial Services, or **TEC IS**, is organized into two focused services groups: *TEC IS Project Group* and *TEC IS Maintenance and Reliability Group*

- The *Project Group* has core competencies in both turnkey solutions and subcontracting efforts in new project installations, as well as expansion and modification projects to existing facilities and processes.
- The *Maintenance and Reliability Group* is focused on expanding its already serviceable pool of E&I and mechanical technicians to thrive in maintenance roles ranging from consulting and development to PM, PdM and CM task execution.

“The re-org just made sense,” says Joe Booth, VP of Business Development for TEC Systems. “The need is there and growing. We are simply utilizing our talent base and developmental training to service the technical needs of our customers.”

These functions were previously performed by Total Electric and TEC Engineering based on the scope of the project or specific maintenance type. TEC IS will continue to work closely with TEC Engineering on automation and consulting projects along with maintenance contracts.

### **About TEC Systems**

TEC Systems delivers solutions and services to help clients improve operational performance, whether it is long-term maintenance engagements, integration projects with its many hardware and software partners, or turnkey electrical or automation projects. TEC also provides IT & Controls Strategy Consulting to help clients uncover lost efficiency within their controls network. The combination of TEC Systems service offerings provides increased productivity and efficient use of capital resources.
